Data Storage in Modern Apps

Storage options in Azure

Data in Motion

Modernize Data Center Migration Paths

Build a simple Feedback app

DEMO

myFeedback App

.NET Core 2.2

Entity Framework

MVC (Model – View – Controller)

Compute

Compute Options

PaaS

IaaS

- Serverless Functions
- App Services
- VM Scale Sets (cloud svcs)
- Service Fabric
- Container Services
- Azure Batch
- Virtual Machines

Considerations

- Hosting model
- DevOps
- Scalability
- Availability
- Architecture style
- Limits
- Budget
- Timeline

What compute should I use?

Questions to ask

- Where do I need my app to run?
- How much control do I need?
- What usage model do I need?
- What functionality do I need?

Deployment Options

Infrastructure as a service (IaaS)

VM

Batch

Container
Service
(AKS)

Web App
For containers

VM
Scale Set

Service
Fabric

Platform as a service (PaaS)

Cloud
Services

Mobile
App

Web
App

Logic as a service (Serverless)

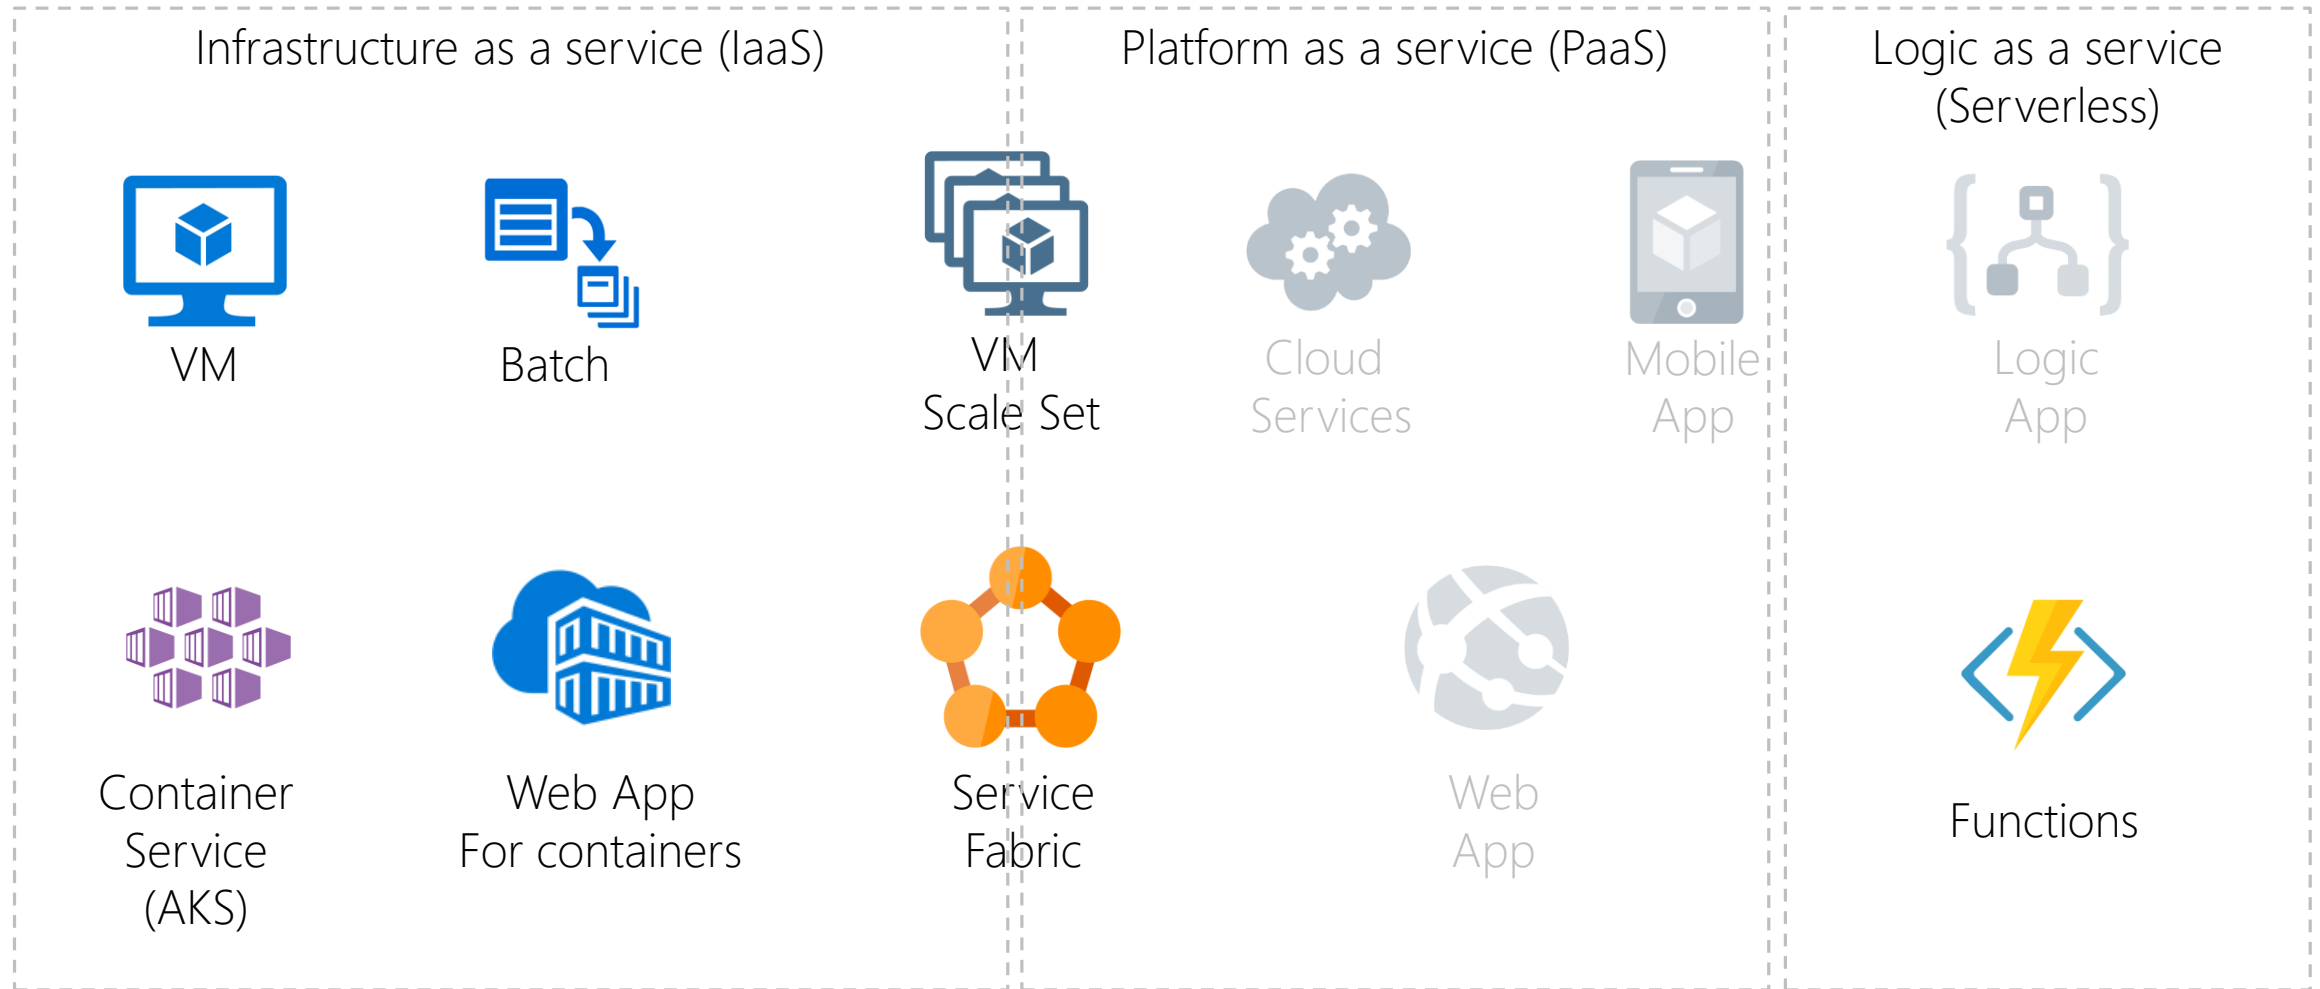

Logic
App

Functions

Deployment Options (run anywhere)

Comparing VM and Container Options

	 VM	 AKS	 Web App for Containers	 Batch	 Service Fabric
Lift-and-shift your app to the cloud	●				
Simple apps (without orchestrator)	●				
Complex Apps		●			●
Orchestrated microservices					●
Web App on Linux with app service features			●		
Repetitive jobs				●	
Run anywhere					●

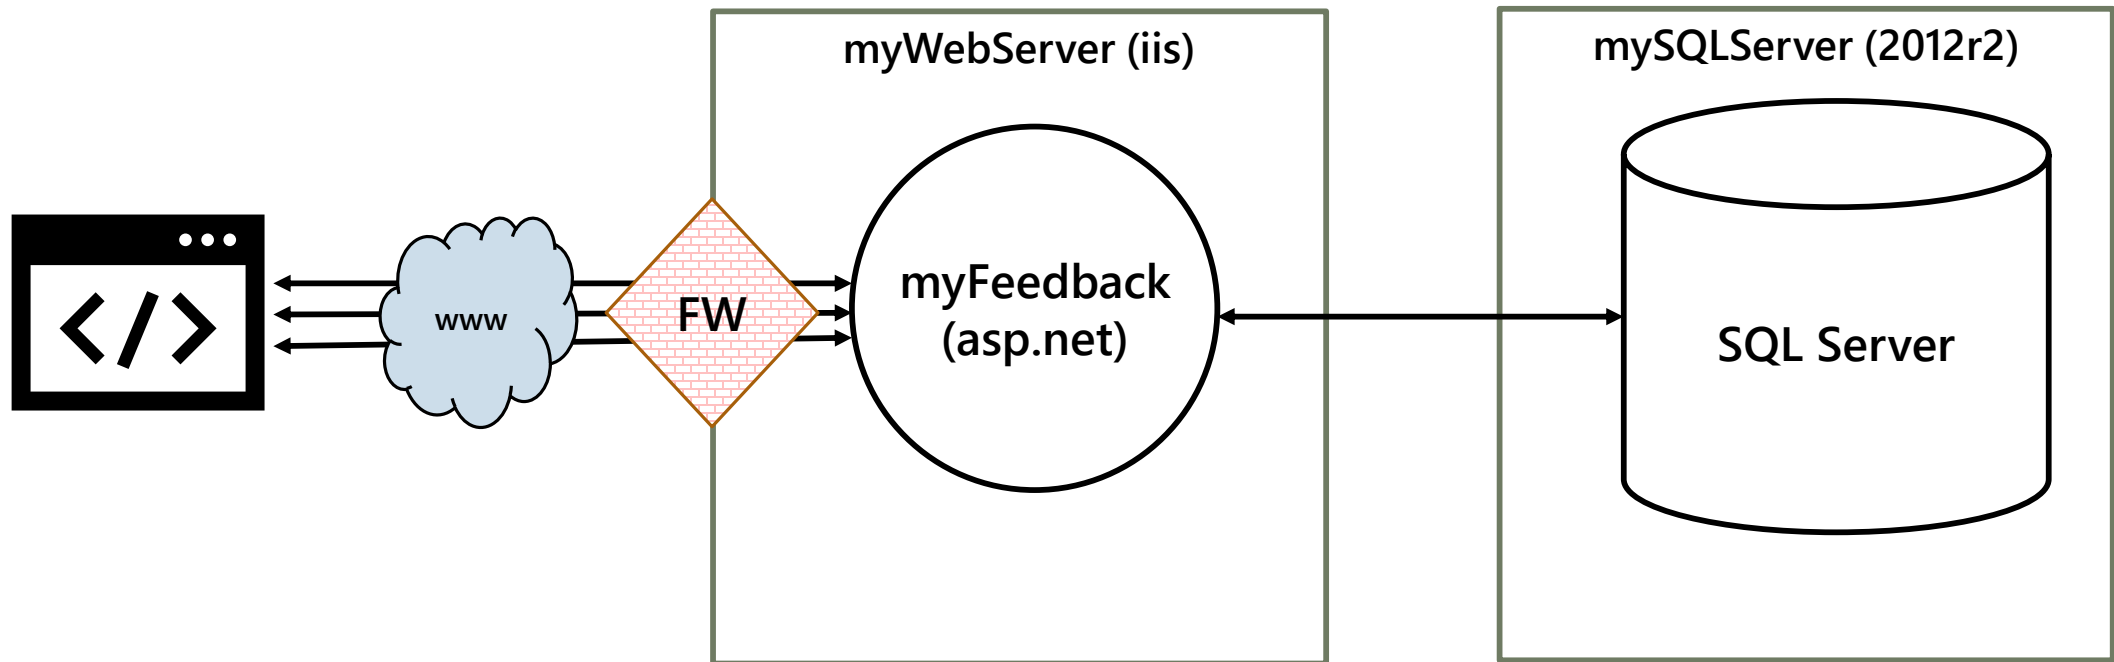

Background Tasks

	 Cloud Services	 Web Job	 Functions	 Batch
Short running tasks	●	●	●	●
Long running tasks	●	●	●	●
Resource intensive tasks				●
Pay all month	●	●		
Pay only for what and when you run			●	
Need to deploy complete app to run	●			●
Can deploy only the code necessary		●	●	

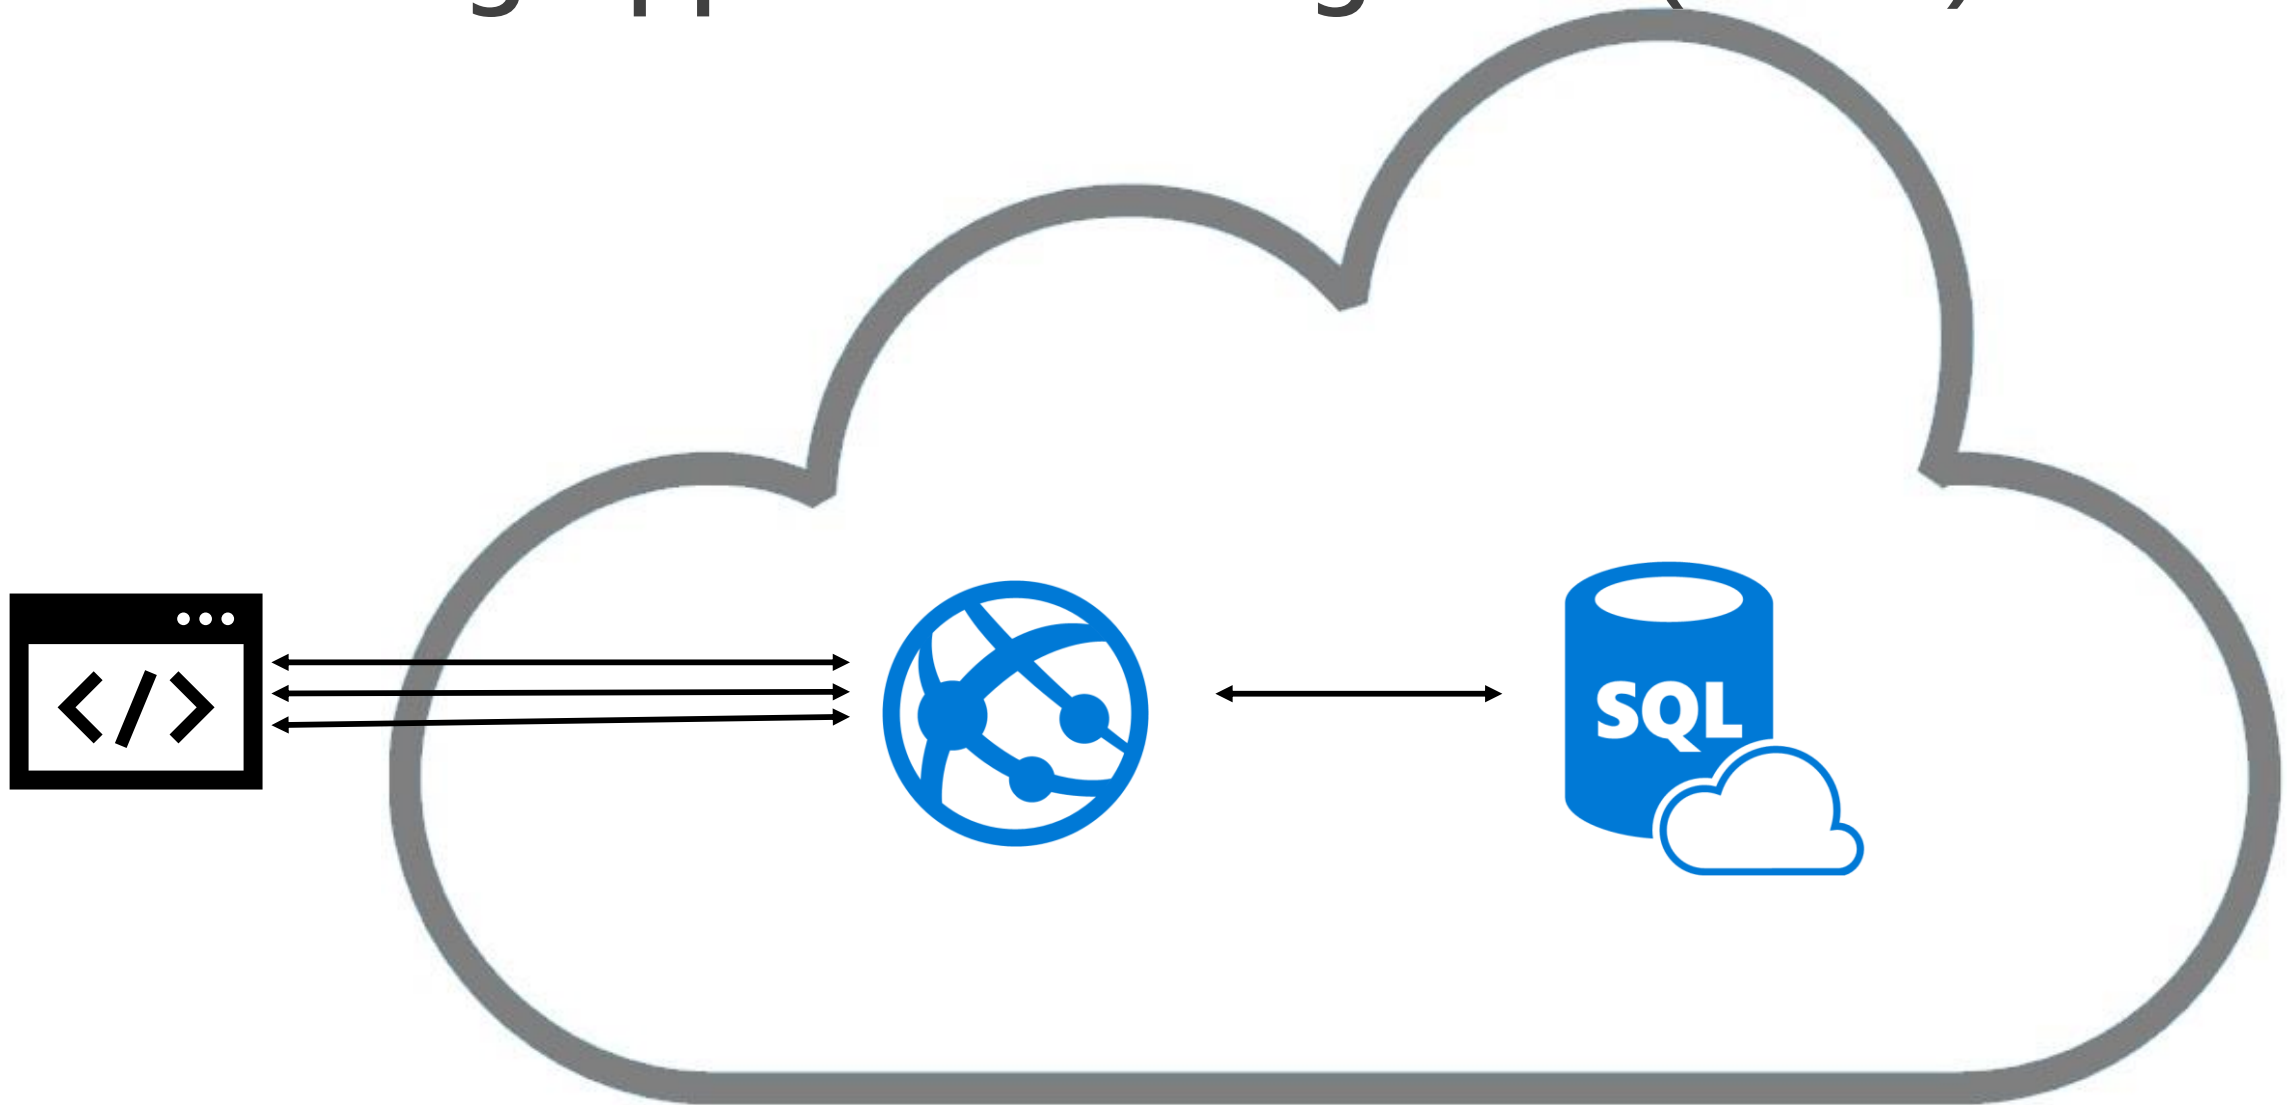

Where to Run Your Apps

	 Web App	 Mobile App	 Cloud Services	 Service Fabric	 Functions	 Logic App
Host web applications	●		●	●		
Host your own APIs	●		●	●	●	
Host backend for mobile apps		●				
Automate one step of a process					●	
Automate a complete process						●
Features like deployment slots, auth, etc.	●	●	●		●	
Run (micro)services at massive scale				●	●	

Running Apps and Storing Data (on premises)

Running Apps and Storing Data (cloud)

Deploy to Cloud

Deploy from Visual Studio

- Create publish profile
- Optionally provision additional services
- Deploy on demand

DEMO

Deploy Web App and SQL

Run Data Migrations

Polyglot (data in Azure)

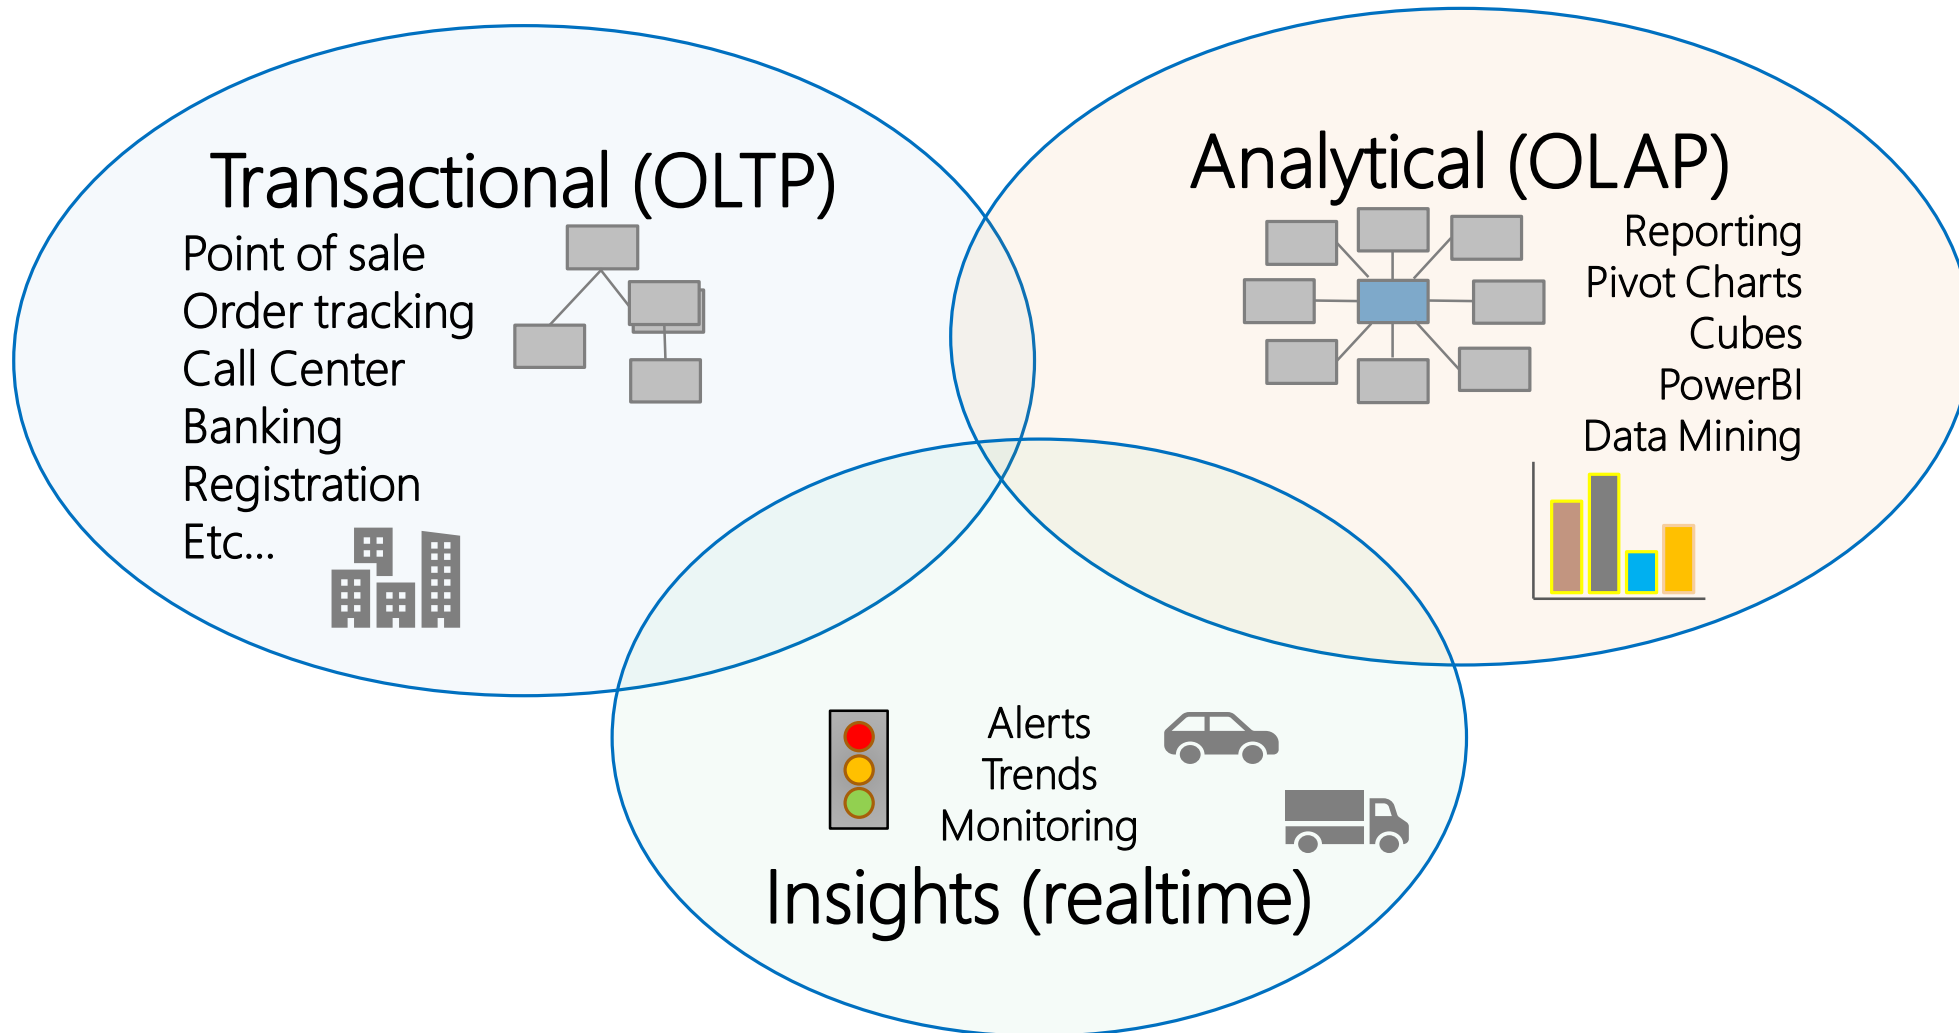

Data Storage in Azure

How will the data be used?

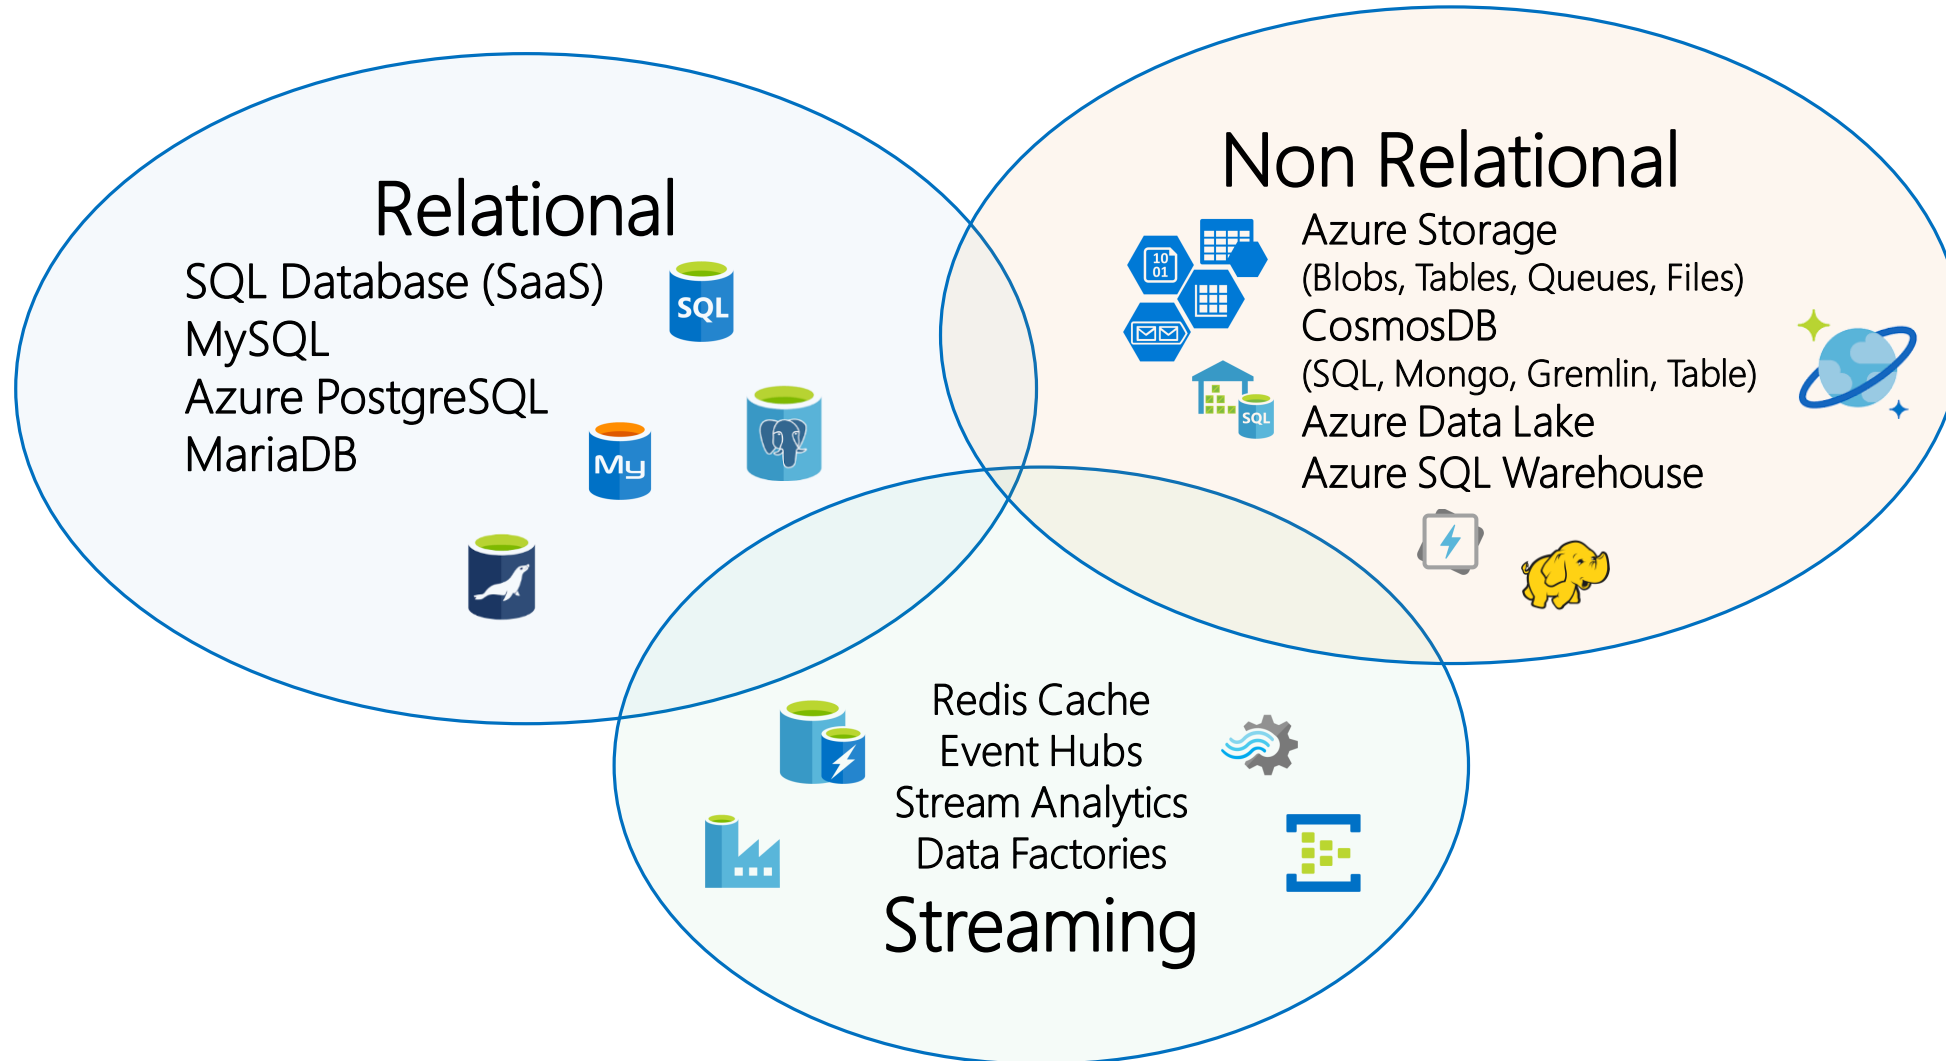

What kind of data?

What functionality do I need?

How will my data be used?

How will my data be used?

Options for storing data in Azure

OLTP

Azure SQL Database

Azure Databases for MySQL

Azure Databases for PostgreSQL

Azure Databases for MariaDB

Azure Cosmos DB

Azure Storage

OLAP

Azure SQL Data Warehouse

Azure Data Lake Store

Redis

Real-time

Stream Analytics

Data Factory

EventHub

Blob

Queue

File

Table

Disk

Comparing Data Stores for OLTP

	 SQL	 MySQL	 PSQL	 MariaDB	 Cosmos	 Storage
Relational data	●	●	●	●		
Semi- or non-relational data					●	●
Can use Microsoft tools to manage	●					●
Advanced query capabilities	●	●	●	●		
Multi-model support						
Guaranteed performance					●	
Geo replicable	●				●	●
